

**AMENDMENTS TO THE CLAIMS:**

Please amend the claims as follows:

1. (Currently Amended) A remote distribution cabinet comprising:  
at least one panelboard having a plurality of circuit breakers;  
a plurality of structural members forming a portion of an exterior surface of said cabinet,  
said structural members being attached to the panelboard, thereby forming a frame  
structure including the panelboard; and  
a bottom member attached to the structural members.
2. (Original) The remote distribution cabinet of claim 1 wherein the bottom member is  
sized to allow the remote distribution cabinet to fit within a raised floor tile space.
3. (Original) The remote distribution cabinet of claim 2 further comprising a junction box  
attached to the bottom member so as to be disposed beneath a raised floor.
4. (Original) The remote distribution cabinet of claim 1 further comprising at least one  
access panel covering the plurality of circuit breakers.
5. (Original) The remote distribution cabinet of claim 4 wherein the access panel allows  
visual inspection of the circuit breakers without opening the access panel.
6. (Original) The remote distribution cabinet of claim 4 wherein said access panel is  
adjustable to allow for a shift in the position of the circuit breakers within the panelboard.
7. (Original) The remote distribution cabinet of claim 1 comprising at least two  
panelboards wherein one or more panelboards are arranged to receive power from different  
sources.

8. (Original) The remote distribution cabinet of claim 7 further comprising a tie-breaker for providing power from one of a plurality of sources to one or more panelboards.
9. (Original) The remote distribution cabinet of claim 1 further comprising a tie-breaker for providing power from one of a plurality of sources to one or more panelboards.
10. (Original) The remote distribution cabinet of claim 1 further comprising a current monitoring unit arranged to measure the current of each panelboard.
11. (Original) The remote distribution cabinet of claim 1 further comprising at least one main circuit breaker for each panelboard.
12. (Previously Presented) The remote distribution cabinet of claim 1 further comprising an access panel separately covering each of the at least one panelboards, wherein when the access panel is removed, service can be performed on the at least one panelboard without exposing other energized components of the remote distribution cabinet.
13. (Original) The remote distribution cabinet of claim 12 wherein the access panel allows visual inspection and operation of the panelboard circuit breakers without opening the access panel.
14. (Currently Amended) A remote distribution cabinet comprising:
  - at least one panelboard;
  - a frame structure comprising a plurality of structural members, each of said members forming a portion of an exterior surface of said cabinet; and
  - a means for incorporating said panelboard into a said frame structure ~~for the remote distribution cabinet.~~

15. (Currently Amended) The remote distribution cabinet of claim 14 wherein the means for incorporating said panelboard into the frame structure includes a bottom member sized to allow the remote distribution cabinet to fit within a raised floor tile space.
16. (Original) The remote distribution cabinet of claim 15 further comprising a junction box attached to the bottom member so as to be disposed beneath a raised floor.
17. (Original) The remote distribution cabinet of claim 14 wherein the panelboard comprises a plurality of circuit breakers and the remote distribution cabinet further comprises at least one access panel covering the plurality of circuit breakers.
18. (Original) The remote distribution cabinet of claim 17 wherein the access panel allows visual inspection of the circuit breakers without opening the access panel.
19. (Original) The remote distribution cabinet of claim 17 wherein said access panel is adjustable to allow for a shift in the position of the circuit breakers within the panelboard.
20. (Previously Presented) The remote distribution cabinet of claim 14 comprising at least two panelboards wherein one or more panelboards are arranged to receive power from different sources.
21. (Original) The remote distribution cabinet of claim 20 further comprising a tie-breaker for providing power from one of a plurality of sources to one or more panelboards.
